

Table of Contents

Preface

Part I. Principles of Cognitive Neurorehabilitation: Introduction to Part I
George Winocur

1. Principles of neuroplasticity and behaviour Bryan Kolb and Robbin Gibb
2. Principles of compensation in cognitive neuroscience and neurorehabilitation
Roger A. Dixon, Douglas D. Garrett and Lars Bäckman
3. The patient as a moving target - the importance to rehabilitation of
understanding variability Donald T. Stuss and Malcolm A. Binns
4. Steroids and allostasis in brain plasticity Richard G. Hunter and Bruce S.
McEwan
5. Principles in conducting rehabilitation research Amy D. Rodriguez and Leslie
J. Gonzalez Rothi
6. Outcome measurement in cognitive neurorehabilitation Nadina Lincoln and
Roshan das Nair
7. Principles in evaluating cognitive rehabilitation research Keith D. Cicerone

Part II. Application of Imaging Technologies:

Introduction to Part II Donald T. Stuss

8. Structural neuroimaging - defining the cerebral context for cognitive
rehabilitation Joel Ramirez, Fu Qiang Gao and Sandra E. Black
9. Functional neuroimaging and cognitive rehabilitation - healthy aging as a
model of plasticity Cheryl Grady
10. Functional brain imaging and neurological recovery Maurizio Corbetta
11. The role of neuroelectric and neuromagnetic recordings in assessing
learning and rehabilitation effects Claude Alain and Bernhard Ross

Part III. Factors Affecting Successful Outcome:

Introduction to Part III Ian H. Robertson

12. Mood, affect and motivation in rehabilitation Omar Ghaffar and Anthony
Feinstein
13. Anosognosia and the process and outcome of neurorehabilitation George P.
Prigatano
14. Psychosocial considerations for cognitive rehabilitation Deirdre R. Dawson
and George Winocur
15. Exercise, cognition, and dementia Erik Scherder and Laura Eggermont
16. Is there a role for diet in cognitive rehabilitation? Matthew Parrott and
Carol E. Greenwood

Part IV. Pharmacological and Biological Approaches:

Introduction to Part IV George Winocur

17. Pharmacologic approaches to cognitive rehabilitation Thomas W. McAllister
and Amy F. T. Arnsten
18. Pharmacologic treatment of cognitive impairment after traumatic brain
injury John Whyte
19. Pharmacological interventions for cognition in dementia John M. Ringman
and Jeffrey L. Cummings
20. Neurogenesis-based regeneration in the adult brain, is it feasible? J. Martin
Wojtowicz
21. The impact of cerebral small vessel disease on cognitive impairment Harry

Vinters and S. Thomas Carmichael

22. Intrinsic and extrinsic neural stem cell treatment of central nervous system injury and disease Trudi Stickland, Samuel Weiss and Bryan Kolb

Part V. Behavioural/Neuropsychological Approaches:

Introduction to Part V Ian H. Robertson and Donald T. Stuss

23. The use of constraint induced movement therapy (CI therapy) to promote motor recovery following stroke David Morris and Edward Taub

24. Effects of physical activity on cognition and brain Arthur Kramer, Kirk Erickson and Edward McAuley

25. Aphasia Susan A. Leon, Stephen Nadeau, Michael de Riesthal, Bruce Crosson, John C. Rosenbek and Leslie J. Gonzalez Rothi

26. Rehabilitation of neglect Victoria Singh-Curry and Masud Husain

27. Rehabilitation of frontal lobe functions Brian Levine, Gary R. Turner and Donald T. Stuss

28. Executive functioning in children with traumatic brain injury in comparison to developmental ADHD Gerri Hanten and Brian Levine

29. Rehabilitation of attention following traumatic brain injury Jennie Ponsford

30. Memory rehabilitation for people with brain injury Barbara A. Wilson and Narinder Kapur

31. Memory rehabilitation in older adults Elizabeth L. Glisky and Martha Glisky

Part VI. Overview:

32. The future of cognitive neurorehabilitation Ian H. Robertson and Susan M. Fitzpatrick.
