

Table of contents

SECTION I Differential diagnoses for owner chief concerns and physical examination findings

Chapter 1	Abnormal mentation and behavior	1	Chapter 5	Spinal pain	21
	<i>Rodrigo Gutiérrez Quintana</i>			<i>Joe Fenn</i>	
	■ Definition and pathophysiology	1		■ Pathophysiology	21
	■ Clinical signs	2		■ Clinical signs	22
	■ Diagnostic approach	2		■ Diagnostic approach	24
Chapter 2	Seizures	5	Chapter 6	Gait abnormalities: ataxia, paresis, and paralysis	25
	<i>Fabio Stabile</i>			<i>Gualtiero Gandini</i>	
	■ Definition of seizure	5		■ Pathophysiology	25
	■ Epileptic seizures	5		■ Functional anatomy of gait	25
	■ Reactive seizures	6		■ Clinical features of gait abnormalities	26
	■ Epilepsy	6		■ Diagnostic approach	27
	■ Disorders mimicking epileptic seizures	7			
	■ Diagnostic approach to seizures	8	Chapter 7	Exercise intolerance	31
Chapter 3	Loss of balance, head tilt, and nystagmus	11		<i>Gualtiero Gandini</i>	
	<i>Catherine Stalin</i>			■ Pathophysiology	31
	■ Pathophysiology	11		■ Functional anatomy of the neuromuscular system	31
	■ Clinical signs	12		■ Clinical signs	31
	■ Diagnostic approach	12		■ Diagnostic approach	33
Chapter 4	Anisocoria	15			
	<i>Elsa Beltrán</i>				
	■ Pathophysiology	15			
	■ Clinical signs	17			
	■ Diagnostic approach	17			

SECTION II The basics of clinical neurology

Chapter 8	Approach to the neurological patient	37	■ Cutaneous trunci (formerly panniculus) reflex (CTR).....	54	
	<i>Alberta de Stefani</i>		■ Vertebral column palpation.....	55	
	■ Communication.....	37	■ Pain perception (nociception).....	56	
	■ Managing the environment.....	39	■ Conclusion	56	
	■ Clinical reasoning framework.....	40			
Chapter 9	Neurologic examination	43	Chapter 10	Neurolocalization and differential diagnoses	59
	<i>Ronaldo Casimiro da Costa</i>			<i>Alberta De Stefani</i>	
	■ Definitions of motor deficits	43		■ Neurolocalization	59
	■ Performing the neurologic examination	44		■ Differential diagnoses	65

**SECTION III Techniques and procedures**

Chapter 11	Laboratory investigations	69	Chapter 14	Electrodiagnostic investigations	99
	<i>Giulia Cagnotti</i>			<i>Ezio Bianchi</i>	
	■ Standard minimum database	69		■ Electrodiagnostic tests performed in the diagnostic evaluation of neuromuscular disorders	99
Chapter 12	Genetic testing in neurological diseases	77		■ Electrodiagnostic tests performed in the diagnostic evaluation of auditory pathways and central nervous system disorders	104
	<i>Dennis O'Brien</i>		Chapter 15	Physical rehabilitation of the neurological patient	109
	■ Recognizing hereditary disease	77		<i>Diane V. Messum</i>	
	■ Segregation analysis	80		■ Principles	110
	■ DNA test development	81		■ The rationale for neurological rehabilitation	110
	■ Candidate gene approach	81		■ Neurological physical rehabilitation treatment	111
	■ Genome-wide association studies	81		■ Indications for physical rehabilitation	113
	■ Whole-genome sequencing	81		■ Summary	114
	■ Clinical use of DNA tests	82			
	■ Genetic counseling	83			
Chapter 13	Neuroimaging	85			
	<i>Silke Hecht</i>				
	■ General approach to neuroimaging of the canine patient	85			
	■ Imaging modalities	91			

SECTION IV Neurological diseases

Chapter 16	Canine idiopathic epilepsy	117	Chapter 20	Canine cognitive dysfunction syndrome	151
	<i>Sofie F. M. Bhatti</i>			<i>Natasha Olby</i>	
	■ Disease definition, etiology, and semiology	117		■ Etiology and pathophysiology	151
	■ Diagnostic approach	118		■ Clinical presentation	152
	■ Quality of life (QoL)	125		■ Diagnosis	152
				■ Conclusions	155
Chapter 17	Management of status epilepticus and cluster seizures	129	Chapter 21	Cerebrovascular accidents	157
	<i>Marios Charalambous</i>			<i>Cristian Falzone</i>	
	■ Status epilepticus	129		■ Introduction and disease definition	157
	■ Cluster seizures	131		■ Ischemic cerebrovascular accidents	157
				■ Hemorrhagic cerebrovascular accidents	161
Chapter 18	Tremors and twitches	135	Chapter 22	Traumatic brain injury	165
	<i>Mark Lowrie</i>			<i>Louise Clark</i>	
	■ Tremors	135		■ How TBI affects the brain	165
	■ Twitch	138		■ Secondary brain injury	166
				■ Intracranial pressure	166
Chapter 19	Paroxysmal dyskinesia	141		■ Pathophysiology after TBI. Cellular mechanisms	167
	<i>Mark Lowrie</i>			■ How to manage TBI in the acute phase	167
	■ Terminology	141	Chapter 23	Idiopathic peripheral vestibular disease	171
	■ Pathophysiology	141		<i>Marika Menchetti</i>	
	■ Etiology	143		<i>Gualtiero Gandini</i>	
	■ Clinical features	145		■ Etiology	172
	■ Differential diagnoses	145		■ Clinical presentation	172
	■ Classification	146		■ Differential diagnosis	173
	■ Clinicopathological findings	147		■ Clinicopathological findings	173
	■ Diagnostic imaging	148		■ Diagnostic imaging findings	174
	■ Prognosis	148		■ Prognosis	174

Chapter 24	Neoplasms affecting the central nervous system	177	Chapter 31	Spinal malformations	243
	<i>John H. Rossmeisl</i>			<i>Steven De Decker</i>	
	■ Definition and etiology	177		■ Vertebral malformations.....	243
	■ Clinical features	177		■ Spinal malformations	248
	■ Clinicopathological findings.....	179	Chapter 32	Cervical spondylomyelopathy	253
	■ Diagnostic imaging findings	179		<i>Ronaldo Casimiro da Costa</i>	
	■ Other diagnostic procedures	182		■ Etiology	253
Chapter 25	Infectious central nervous system disorders and discospondylitis	185		■ Clinical features	253
	<i>Renee Barber</i>			■ Clinicopathological findings.....	255
	■ Viral infections	185		■ Prognosis	257
	■ Parasitic infections	188	Chapter 33	Lumbosacral stenosis	259
	■ Fungal	189		<i>Frank Steffen</i>	
	■ Bacterial	192		■ Etiology and pathophysiology.....	259
Chapter 26	Meningoencephalomyelitis of unknown origin	197		■ Clinical presentation	260
	<i>Renee Barber</i>			■ Diagnostic imaging	260
	■ Etiology	197		■ Electrodiagnostic examinations.....	261
	■ Clinical features	198	Chapter 34	Degenerative myelopathy	265
	■ Clinicopathological findings.....	199		<i>Joan R. Coates</i>	
	■ Diagnostic imaging findings	199		■ Etiology	265
	■ Other diagnostic procedures	201		■ Clinical features	267
	■ Prognosis	203		■ Diagnosis	267
				■ Prognosis	270
Chapter 27	Canine Chiari malformation and syringomyelia	205	Chapter 35	Myopathies and junctionopathies (myasthenia gravis)	273
	<i>Clare Rusbridge</i>			<i>Lara A. Matiassek</i>	
	■ Etiology	205		■ Myopathies.....	273
	■ Clinical signs	207		■ Junctionopathies (myasthenia gravis).....	277
	■ Diagnosis	208	Chapter 36	Neuropathies	281
	■ Prognosis	213		<i>Lluís Sánchez</i>	
	■ Genetic factors and breeding advice	213		■ Generalized neuropathies	281
Chapter 28	Steroid responsive meningitis-arthritis	217		■ Cranial neuropathies	283
	<i>Oliver Marsh</i>			■ Single-limb neuropathies	285
	■ Disease definition and etiology	217	Chapter 37	Neurogenic bladder dysfunction	289
	■ Clinical features	218		<i>Federica Balducci</i>	
	■ Clinicopathological findings.....	219		■ Functional neuroanatomy of the lower urinary tract.....	289
	■ Diagnostic imaging	219		■ Etiology	291
	■ Histopathology	219		■ Clinical presentation	291
	■ Prognosis	222		■ Clinicopathological findings.....	292
Chapter 29	Intervertebral disc herniation	225		■ Diagnostic procedures	293
	<i>Natasha Olby</i>			■ Prognosis	294
	■ Hansen type I intervertebral disc extrusion	225	Chapter 38	Neuropathic pain and neuroanalgesia	297
	■ Acute noncompressive nucleus pulposus extrusion (ANNPE).....	231		<i>Louise Clark</i>	
	■ Hydrated nucleus pulposus extrusion (HNPE).....	232		■ Pain definitions.....	297
	■ Hansen type II intervertebral disc protrusion (IVDP).....	232		■ Mechanisms of neuropathic pain	297
	■ Conclusions	234		■ Diagnosis	298
Chapter 30	Fibrocartilaginous embolic myelopathy	237		■ Management of neuropathic pain.....	299
	<i>Sarah A. Moore</i>			■ Practical pharmacology	300
	■ Disease definition/etiology	237			
	■ Clinical presentation/features.....	237		Index	303
	■ Prognosis	240
