

CONTENTS

PART ONE: GENERAL APPROACH TO MYASTHENIA GRAVIS.	1
1.1 Epidemiology and natural history of myasthenia gravis	3
<i>Giovanni Antonini, Matteo Garibaldi, Elena Rossini, Stefania Morino, Laura Fionda</i>	
1.2 Pathophysiology of neuromuscular transmission	28
<i>Maria Pia Giannoccaro, Rocco Liguori</i>	
1.3 Immunopathogenesis of myasthenia gravis	45
<i>Valentina Damato</i>	
1.4 Clinical presentation of myasthenia gravis	67
<i>Carmelo Rodolico, Alessia Pugliese</i>	
1.5 Therapy of myasthenia gravis before the advent of biologics. .	74
<i>Laura Fionda, Matteo Garibaldi, Stefania Morino</i>	

PART TWO: INNOVATIVE BIOLOGICAL THERAPIES IN MYASTHENIA GRAVIS	85
2.1 B-cell depletion therapy	87
<i>Carmen Erra, Federico Habetswallner, Bernardo De Martino, Francesco Habetswallner</i>	
2.2 The role of complement in myasthenia gravis: mechanisms and therapeutic implications.	109
<i>Renato Mantegazza, Fiammetta Vanoli</i>	
2.3 Neonatal Fc receptor blockade	123
<i>Francesco Saccà</i>	
2.4 Cytokine and chemokine interactions	135
<i>Chiara Cambieri, Laura Libonati, Marco Ceccanti, Maurizio Inghilleri</i>	
PART THREE: NEW TARGETED AGENTS AND FUTURE THERAPEUTIC STRATEGIES IN MYASTHENIA GRAVIS . .	149
3 Potential future targets and strategies in the treatment of myasthenia gravis	151
<i>Laura Fionda, Elena Rossini, Laura Tufano, Giovanni Antonini</i>
