TABLE OF CONTENTS

SECTION A ***1***

Introduction 1

Key statistical concepts 3

SECTION B ***5***

Types of data 5

Probability and distributions 9

Sample size calculations 14

Data cleaning, processing and management 19

Descriptive statistics 24

P-values and statistical significance 28

Confidence intervals 32

T-tests, analysis of variance and other parametric tests 36

Comparing 2 continuous variables 41

Comparing 3 or more continuous variables 45

Non-parametric tests 50

Comparing categorical variables 54

SECTION C ***59***

Regression analysis 59

Survival analysis 63

From bivariate to multivariable analysis 67

Observational studies 72

Propensity scores 77

Randomized controlled trials 82

Diagnostic studies 87

SECTION D **92**

Bayesian statistics 92

Missing data 97

Cost-effectiveness and cost-utility 102

Machine learning 108

Unsupervised learning 113

Supervised learning 118

Artificial intelligence 122

Systematic reviews 126

Meta-analysis 130

Umbrella reviews 135

Statistical packages 139

Presenting and interpreting data 144

SECTION E **149**

Step-by-step tutorial on an observational study: from idea to publication 149

Common statistical pitfalls 151

Ethical issues and reporting recommendations 153

Conclusions 155

Glossary 156

Abbreviations and acronyms 159

References 162
